

Water Treatment Plant

What happens to water before it reaches your tap? Match the descriptions below to the appropriate step in the water purification process .

1. Filters trap even more dirt and particles
2. Air is added. Gasses in the water escape. Oxygen is added to the water.
3. Chemicals are added to the water. These chemicals attract dirt making the particles heavy.
4. Dangerous microorganisms are destroyed by chlorine
5. The clean water is stored and transported through pipes to your tap
6. Dirt sinks to the bottom and the cleaner water is moved to the next stage of treatment
7. Water purification in the City

Water Purification in an Ecosystem
